Can I use my existing home phone sockets with Talk+?

Quickline Talk · https://quickline.co.uk/knowledge/can-i-use-my-existing-home-phone-sockets-with-talk/

No, Quickline Talk+ does not connect to or reuse any existing telephone wiring or extension sockets in your home.

Only the phone that is **plugged directly into your router** will work with the Talk+ service.

Want phones in other rooms?

The easiest solution is to use a **cordless phone system with multiple handsets**. These usually include:

- A main base station (which plugs into your router)
- Extra handsets you can place in different rooms around your home

You can buy these cordless phone kits from most high street stores or online retailers like Argos, Currys, Amazon, or similar. They're easy to set up and a great way to stay connected throughout your home.
