How is Wi-Fi Everywhere installed?

Wi-Fi Everywhere · https://quickline.co.uk/knowledge/how-is-wi-fi-everywhere-installed/

Getting Wi-Fi Everywhere set up in your home is simple and stress-free. In this article, we'll walk you through what happens during the installation and what to expect.

We take care of everything for you

There's no need to worry about setting anything up yourself. One of our trained engineers will visit your home on your agreed installation day and do the full install for you.

Here's what they'll do:

- Check the layout and size of your home
- Set up your main broadband router (if it's not already installed)
- Fit one or more Wi-Fi access points to make sure every room is covered
- Test the signal and speed in each room
- Make sure you're getting at least 25Mbps in every part of your home

The whole process is quick and tidy, with no mess left behind.

What do I need to do?

Very little! But here are a few things that can help:

- Make sure someone over 18 is at home for the visit
- Clear a little space around your router and plug sockets
- Let the engineer know about any rooms where Wi-Fi is usually weak

We'll handle the rest.

We're always here if you need help

If anything doesn't feel right after the install, just get in touch. We'll talk you through a quick check or arrange a follow-up visit to check in on your WiFi service.
