How many access points will I need?

Wi-Fi Everywhere · https://quickline.co.uk/knowledge/how-many-access-points-will-i-need/

Wi-Fi Everywhere is designed to give you strong, reliable signal in every room of your home. This article explains how we decide how many access points you need.

Don’t worry – we’ll work it out for you

The number of access points you need depends on the size and layout of your unique home as well as various environmental factors such as insulation or materials used in the properties construction. This makes it really difficult to know how many access points you will need. During your install, our engineer will check how your home is built and where your signal needs the most help.

You don’t need to guess how many access points you need. Our engineer will:

- Test the signal in different rooms
- Choose the best spots to place the access point/s
- Make sure you’re getting at least 25Mbps everywhere

We're here to help

If you’re still having trouble with your Wi-Fi after the install, let us know. We’ll check everything and work with you to get it right. For any doubts about the number of access points required, feel free to reach out.
