I’ve been told you’ll need to do a dig to connect my property. What does that mean?

Installation · https://quickline.co.uk/knowledge/ive-been-told-youll-need-to-do-a-dig-to-connect-my-property-what-does-that-mean/

We will run our fibre to your property boundary, leaving our own connection point there.

We will then need to dig at a suitable depth and bury our cable in your garden between our connection point at your boundary and the external wall of your property.

How we complete this dig will be dependent upon the type of surface from our connection point at the boundary to the external wall of your property. We may need to complete a survey to decide the route of the dig first. Our engineers will always seek the most efficient route for the cable and will leave your garden as close to its original state as possible.
