What is Wi-Fi Everywhere and how does it work?

Wi-Fi Everywhere · https://quickline.co.uk/knowledge/what-is-wi-fi-everywhere-and-how-does-it-work/

If you've ever had patchy Wi-Fi in certain rooms of your home, you're not alone. Quickline's Wi-Fi Everywhere service fixes weak signal issues and guarantees strong Wi-Fi in every room. This article explains what Wi-Fi Everywhere is, how Wi-Fi Everywhere works, and how it helps you get reliable connectivity throughout your home.

What is Wi-Fi Everywhere?

Wi-Fi Everywhere is an add-on to your Quickline broadband that gives you guaranteed Wi-Fi signal across your whole home. Some properties have weak Wi-Fi signal in certain areas due to thick walls, insulation, or simply because they're large and difficult to cover with just one router.

The Wi-Fi Everywhere Guarantee

With this service:

- You'll get a strong, reliable wireless signal in every room inside your house
- We guarantee speeds of at least **25Mbps in each room** (enough to stream HD videos)
- If you ever drop below that speed, we'll work with you to fix it at no extra cost

It's perfect for busy homes where everyone needs to stay online, whether for streaming, video calls, working from home, or gaming. It's about getting Wi-Fi signal everywhere, that just works.

How Does Wi-Fi Everywhere Work?

Wi-Fi Everywhere works by installing additional mesh access points throughout your home to spread your Wi-Fi signal more evenly. Our trained engineers handle the entire installation process.

What Gets Installed

Here's what we'll install for Wi-Fi Everywhere:

- **Broadband router** that connects to your internet (if you're an existing customer, you already have this)
- **Mesh access point(s)** that plug in around your home to extend your signal

These devices communicate with each other to create one seamless mesh Wi-Fi network across your home. They automatically manage your connection so you're always on the strongest signal available, even as you move between rooms.

Seamless Roaming

The clever part about how Wi-Fi Everywhere works is that it's completely automatic. You don't need to:

- Switch between different Wi-Fi networks
- Manually reconnect as you move around
- Configure anything yourself

It just works in the background, keeping you connected to the best signal at all times.

What Do I Need to Do?

Nothing! We'll set everything up for you, making Wi-Fi Everywhere simple and stress-free.

The Wi-Fi Everywhere Setup Process

1. **Order the service** – Add Wi-Fi Everywhere through our sales team when ordering broadband, or as an add-on later
2. **Book installation** – We'll schedule a convenient engineer visit
3. **Professional installation** – Our engineers arrive on the planned date and set up your mesh network
4. **Testing and verification** – We test the Wi-Fi throughout your home to ensure you have strong signal in every room

When we leave, you'll have Wi-Fi everywhere!

Why Choose Wi-Fi Everywhere?

Wi-Fi Everywhere is ideal if you:

- Have dead zones or weak signal in certain rooms
- Live in a larger property or one with thick walls
- Work from home and need reliable connectivity
- Stream, game, or video call in multiple rooms
- Want professional installation and ongoing support

How Wi-Fi Everywhere Compares to Other Solutions

Unlike Wi-Fi extenders that create separate networks or DIY mesh systems you have to configure yourself, Wi-Fi Everywhere offers:

- Professional installation by trained engineers
- Speed guarantee in every room
- Ongoing support and remote troubleshooting
- Seamless automatic connection management
