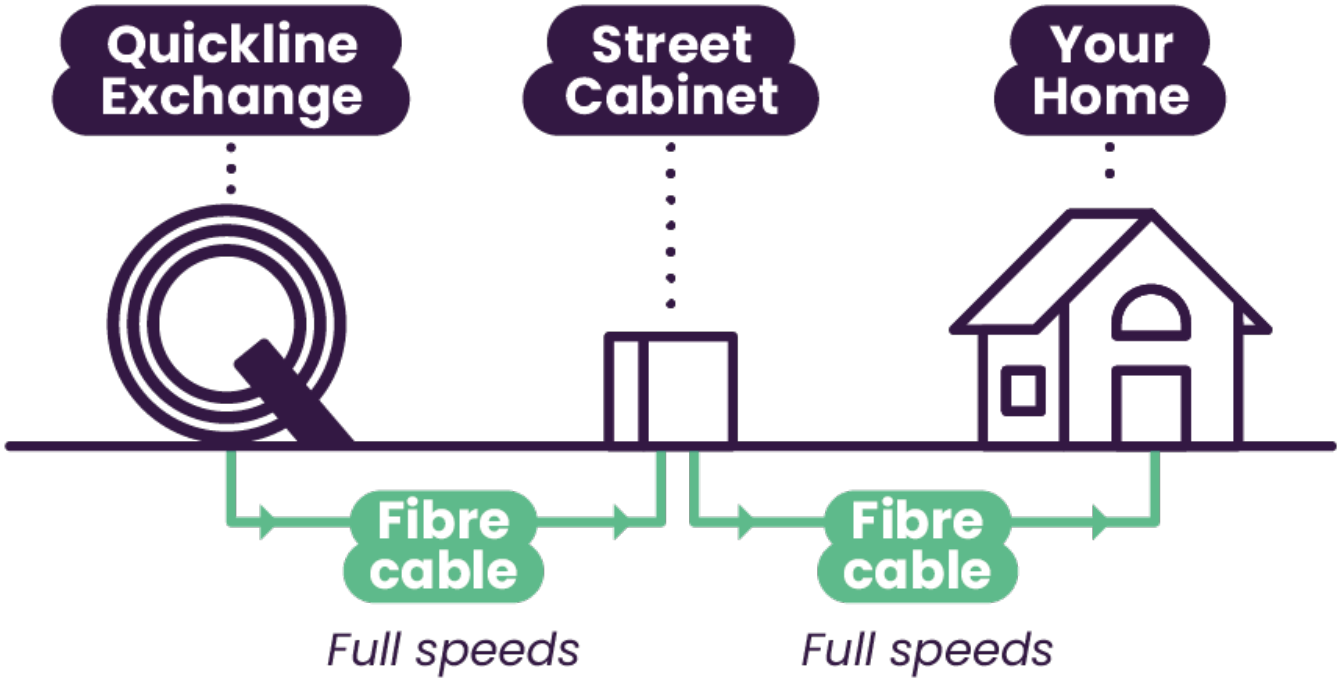
What type of broadband does Quickline Provide?

Frequently Asked Questions · https://quickline.co.uk/knowledge/what-type-of-broadband-do-we-provide/

We offer two types of broadband connections: **Full Fibre** and **Fixed Wireless Access** depending on where you live. To find out which service we can provide at your address, simply check your postcode on our website.

- **Full Fibre** uses fibre-optic cables all the way to your home, delivering faster and more reliable internet than Fibre to the Cabinet (FTTC) and other part-fibre services. FTTC relies on older copper wires for the final stretch of the connection, which can slow down speeds—especially if you live far from the cabinet. With Full Fibre, your connection stays consistently fast and stable, regardless of distance. It's perfect for streaming, gaming, and households with lots of connected devices.



- **Fixed Wireless Access** connects your home to the internet using a secure signal from a nearby mast, rather than through underground cables. It’s an excellent solution for rural or hard-to-reach areas where laying fibre isn’t practical. You still get fast, reliable broadband—ideal for everyday browsing, video calls, streaming, and more—all without needing

a wired connection.
